

Fernald Closure Project

1987

Production Mission:

The site was designed as a large-scale, integrated facility that extracted, purified and formed uranium metal products for U.S. Defense programs through a series of chemical and metallurgical processes. Production operations began in 1951 and ended in 1989.

2004

Cleanup Mission:

When production operations ceased in 1989, the mission for the 1,050-acre site changed to environmental remediation.
